Business Intelligence

An integrated clinical, financial and business intelligence solution

Improve Care and Optimize Reimbursement with CareVoyant

CareVoyant Long-term Care streamlines your facility's workflow by integrating intake, census, receivables and clinical with user-friendly bedside charting. CareVoyant automates MDS and MAR/TAR documentation, simplifies ADL tracking and improves regulatory compliance. Additionally, CareVoyant business intelligence tools monitor your facility's key clinical and financial indicators to improve quality of care and optimize reimbursement.

CareVoyant empowers your facility to:

- Seamlessly integrate census and orders with MDS, MAR/TAR, ADLs and billing
- Eliminate redundant paperwork and data entry
- Consolidate resident information in a single record that's accessible to all users within one location or across multiple facilities and lines of service

CareVoyant Business Intelligence tools monitor resident records to:

- Improve Quality of Care, Compliance and Decision Support
- Optimize Reimbursement and AR Turnover
- Identify Trends, Errors & Outliers in real-time and generate clinical and business alerts

Comprehensive modules and features:

CareVoyant's comprehensive set of modules enables providers to implement the core system initially and later add optional features, functions and even additional lines of service.

- Pre-Admission
- Intake/Census
- Clinical
- MDS/ADLs/eMAR/eTAR
- Pharmacy Interface
- Billing & A/R
- Dashboard
- Physician Portal

- Events & Alerts
- Eligibility
- Collections
- Resident Trust
- Electronic Remittance
- Document Scanning
- Assisted Living Service Plan
- Homecare & Therapy

Solution Highlights:

Software that your Clinical and Financial Staff can Agree on

CareVoyant was developed from the ground up as a single, fully integrated solution to ensure that resident information flows from intake/census through the MDS, clinical and billing. For stand-alone facilities or larger providers, CareVoyant's integrated features ensure that all users have timely access to key information at the point of contact.

Intake/Census Management

The CareVoyant Intake/Census module establishes a single resident record (for multiple admissions and lines of service) that seamlessly integrates with clinical and administrative modules to efficiently manage compliance and billing.

Document Management and Scanning

An integrated Document Management module reduces the need for paper charts and improves access to key information – by linking electronic files to various components of resident records.

MDS

MDS records automatically link with census, care planning, assessments and ADLs. The module also includes user-friendly navigation tools that seamlessly integrate with RAI Manual documentation, 672/802 Forms and billing.

Clinical

CareVoyant touchscreen enabled charting tightly integrates with Intake, Census and MDS functions to eliminate redundant data entry. An Assessment Builder allows facilities to modify and develop clinical forms/assessments within CareVoyant and all components of resident records are easily accessible from the Electronic Health Record.

Billing

CareVoyant Billing and Accounts Receivable is a powerful module that manages disparate payer requirements for SNF, Assisted Living, Therapy and other services. Revenue Cycle Management tools include trust accounting, eligibility checking, an integrated claims scrubber, remittance advice, collections and more.

Events & Alerts

Events & Alerts module defines, detects and notifies users of the occurrence of key clinical and administrative events. Standard events define how alerts are communicated and resolved/escalated and custom events can be created.

Dashboard

The CareVoyant Dashboard provides timely insight into clinical performance and business metrics by distilling, analyzing and graphically displaying clinical and financial Key Performance Indicators (KPIs).

Clinical Benefits

- Automatically create the MDS from clinical assessments, ensuring timely and consistent review
- Graphically display all components of a resident's Electronic Health Record
- Customize care plans, assessments, forms and notes to conform to your organization's practices
- Achieve consistent documentation for all residents within and across facilities and lines of service

Billing/Administrative Benefits

- Improve compliance by pro-actively identifying errors & omissions in resident records
- Simplify census maintenance through automated management tools
- Optimize RUGS to improve reimbursement
- Quickly scrub insurance claims for exceptions
- Use analytics to identify key trends/exceptions and automatically alert users
